

## SUMMARY

I am a Research Fellow in the Sexual Health (including HIV) Unit at the Institute of Tropical Medicine (Antwerp), specialising in access to health services, including HIV and non-communicable disease care, in Eastern and Southern Africa. I am an epidemiologist and mixed-methods researcher with 20+ peer-reviewed publications in leading international journals such as *The Lancet Child & Adolescent Health*, *BMJ Open*, *Vaccine*, *AIDS and Behavior*, and *Journal of the International AIDS Society*. I am a recipient of the Horowitz Foundation for Social Policy Award and have led the conceptualisation of successful grant applications funded by major international donors, including the Bill & Melinda Gates Foundation. In 2025, I defended my PhD at the London School of Hygiene & Tropical Medicine, examining engagement in routine child health services among children of adolescent mothers in South Africa.

My work is motivated by the recognition that health is shaped far more by structural context and circumstance than by individual choice. I approach global health research and practice with a problem-driven perspective, guided by a commitment to ethical research and to having a positive impact for participants and their communities. For over a decade, I have worked across the research-practice continuum, combining academic research with long-term fieldwork, programme implementation, and close collaboration with local partners and stakeholders. Building on my work in maternal, adolescent, and child health, I am increasingly interested in how existing HIV- and maternal-child health-focused service delivery platforms within primary care can be expanded to serve other populations, including men and older/ageing adults.
